Week 1 Unit 3: Deploying Your First HTML5 Application

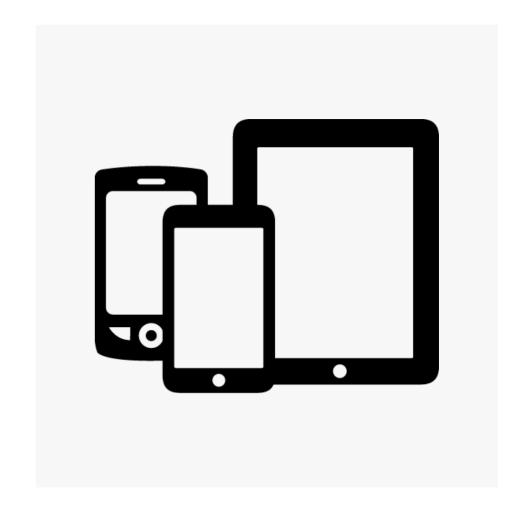

HTML5 applications on SAP HANA Cloud Platform

Consist of static resources

Connect to an existing back end using REST services (on-premise or on-demand)

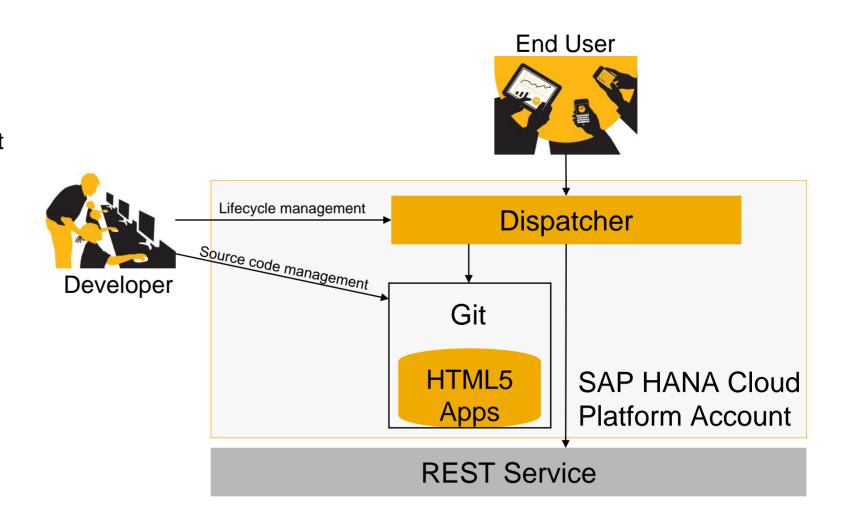

Example:

SAPUI5 application connection to a Yahoo REST service

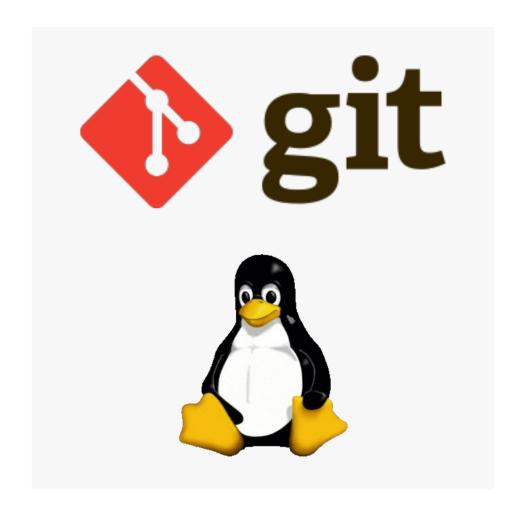

HTML5 applications overview

- Application served by shared service (dispatcher), no VM required
- Integrated version management
- Resources stored in cloud Git repository
- No build and easy deployment

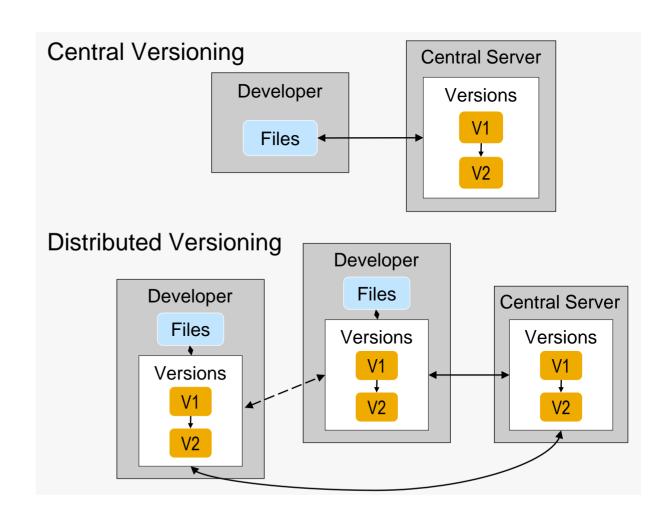

Git overview

- Version control
- Distributed versioning
- Created 2005 for Linux kernel development
- Enables collaborative workflows

Git overview: Distributed versioning

- There is no central authority
- The developer has the complete history
- Versions are created locally
- Branches are created locally

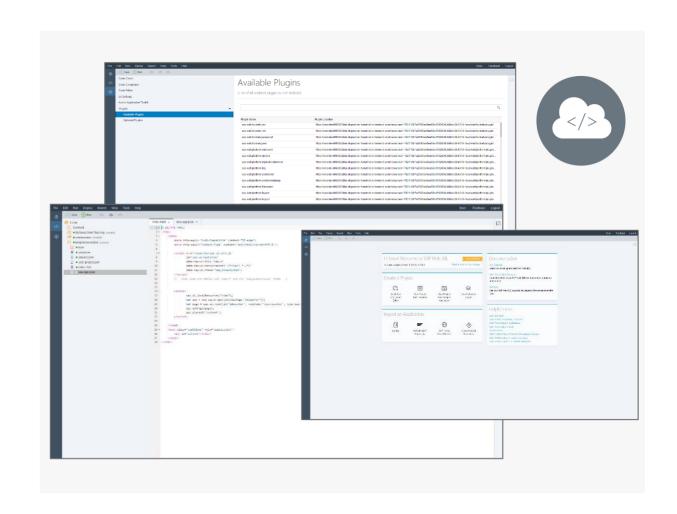

Choose your development environment for HTML5 apps

SAP Web IDE

- Develop online without local installation
- Comes with integrated Git client and online workspace
- Improved developer productivity through wizards, templates, and code editors

Eclipse

- Offline development
- Integrated EGit tooling to work with Git

How to create the "Hello World" HTML5 application

How to create the "Hello World" HTML5 application

Scenario:

Develop a simple "Hello World" HTML5 application

How to do it:

- Create the "Hello World" application via the Web IDE
- Test and deploy the application

What you've learned in this unit

- HTML5 applications on SAP HANA Cloud Platform
- The development infrastructure
- Git
- Options for development environments
- How to create a simple HTML5 application
- How to test an HTML5 application

Thank you
